

The 112 Video Project

The 112 VIDEO project was recently showed to the President of ONI (the second largest carrier in Portugal). The feedback was extremely positive, and an immediately invitation was made by the President of ONI (Xavier Martin) to Nuno Carvalho to present a video, simulating a real situation of an emergency, with a video call to the 112 centre, on the next national event of ONI, at the beginning of October, in Barcelona.

Also the department of the Prime Minister was aware of the project, asking some information to Nuno Carvalho on the project development. It is with great interest that this department is now evaluating the project for further discussion. It was a clear message sent by the Prime Minister department by saying that Portugal must be the first to implement this technology in Portugal.

Meanwhile, Nuno Carvalho started negotiations with Spain and France, with meetings set up for September, where both countries are interested to implement the 112 VIDEO project. The EENA is also helping the founder to go forward with the 112 VIDEO in Belgium.

Recently a venture capital company invested in this project to support it on the continuous development and implementation across the member states. Nevertheless Nuno Carvalho is still working with other investors to increase the venture capital in his company called ZONADVANCED, in order to explore more projects included on the company technology roadmap.

One of the biggest advantages of the 112 VIDEO, when implement across Europe is the easy communication between countries, eliminating languages issues and increasing functionalities, such as video, to reduce the false alarms, concludes Nuno Carvalho.
